

The scatter plot displays 100 data points, represented by blue dots with black outlines, distributed across a 2D coordinate system. The x-axis and y-axis both range from 0 to 6, with major tick marks at intervals of 1. The points are arranged in a structured, grid-like pattern, suggesting a regular sampling or a specific underlying distribution. There are clusters of points, particularly along the vertical and horizontal axes, and in the central region of the plot. The overall distribution is symmetric about the center (3, 3).
